

JOINT REPLACEMENT AT IBJI LIBERTYVILLE

What is Joint Replacement Surgery?

A surgeon removes a knee, hip or another joint damaged by arthritis and replaces it with a new joint, or prosthesis, made of plastic, metal or both.

*S*uccess story

Louis S.
IBJI Libertyville Patient

A former scientific researcher for the 3M Company, Louis searched for the best hip replacement surgeons and discovered IBJI and Dr. Peter J. Thadani. "I thought the surgery would be painful but it turned out to be painless," he emphasizes. He was amazed by how the minimally invasive procedure required only a five-inch surgical incision. "I was walking the day after the operation . . . It was the closest thing to a painless and instant repair of my hip that I can imagine," he says. "Dr. Thadani is a miracle worker."

The logo features a stylized green figure with arms raised, positioned to the left of the text. The text "Stay Connected" is written in a white, sans-serif font, with "Stay" on the top line and "Connected" on the bottom line. The background of the logo area is a gradient of purple and blue.
